Writefull for Institutions

What is Writefull for institutions?

Writefull helps students and researchers with their scientific writing. It offers automated language feedback and writing widgets tailored to academic writing, using AI language models that have been trained on published papers.

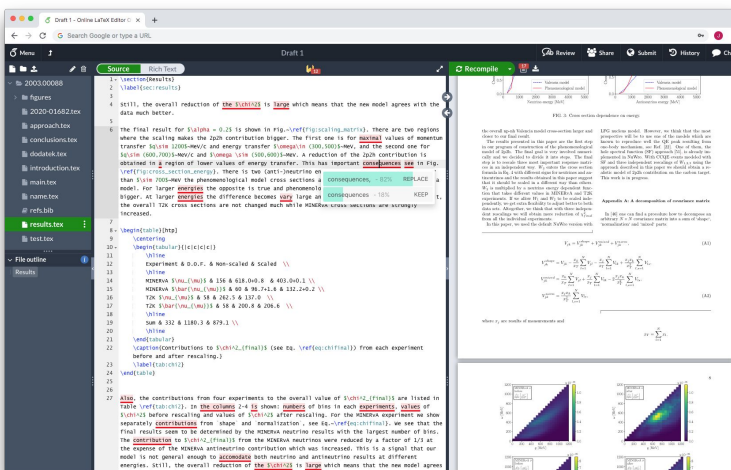

The Writefull suite for institutions **covers five products**: **Writefull for Word** and **for Overleaf**, which help students and researchers write, **Writefull Revise** and **Cite**, which offer a check on the language accuracy and citation completeness of a text, and **Writefull X**, which offers a set of writing widgets in the browser.

Writefull for Word

- Automated language feedback while writing in Word
- Widgets (see next page):
 - Sentence Palette
 - Language Search
 - Title Generator
 - Paraphraser

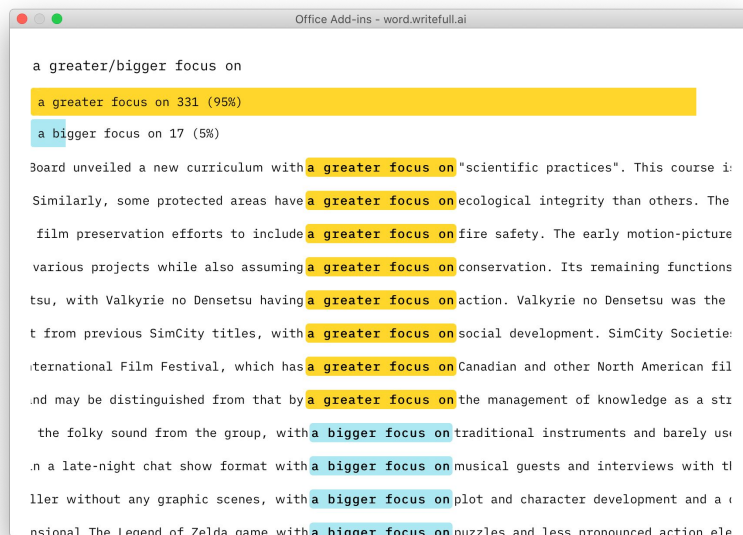

Writefull for Overleaf

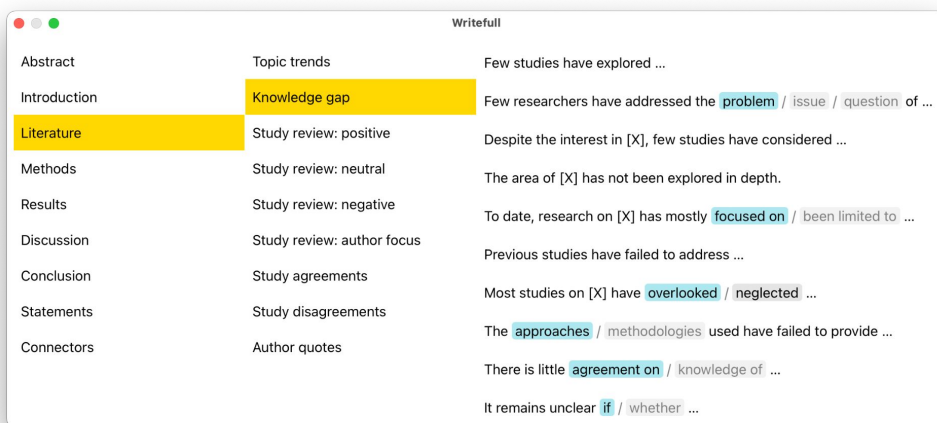

- Automated language feedback while writing in Overleaf
- Widgets (see next page):
 - Sentence Palette
 - Language Search
 - Title Generator
 - Paraphraser
 - Abstract Generator
 - TexGPT (not yet available to institutions)

Writefull for Word and for Overleaf offer **clever widgets** to help students and researchers write.

Language Search A database of journal articles to explore academic language use

Sentence Palette A set of 600+ frequent phrases, organized by paper section

Abstract Generator*

Automatically generates a title based on an abstract or paragraph

Writefull Abstract Generator
BETA v-0.1 Try: [Example from Hindawi](#)

Knowledge, Attitudes, and Practices of Hemodialysis Technicians towards Coronavirus Disease in Central India

Background. The COVID-19 pandemic is a serious public health problem. The aim of this study was to assess the knowledge, attitudes, and practices of hemodialysis technicians in Central India. Materials and Methods. An online survey composed of 22 closed-ended questions using Google Forms was conducted in the month of April (13th to 19th) 2020. The contents of the survey consisted of a questionnaire regarding the knowledge and attitudes of technicians towards coronavirus disease. Results. Out of 150 technicians, 115 participated in the survey. Most of the technicians could correctly identify fever (87.8%), breathlessness (86.08%), and dry cough (81.7%) as the symptoms, while a few could identify sore throat (60.80%), diarrhoea (33.04%), and myalgia (39.13%) as a symptoms of COV-19 infection. About one-third (37.60%) of the respondents were aware that the virus can survive for more than one day on plastic surfaces. The authors suggest that, in this era of opportunistic disease, when there is shortage of trained manpower, he/she can prove to be an important link for transmitting correct information about the disease to the patients along with measures/methods to prevent the spread of disease in the community.

Generate abstract and title

Click here to generate. The text must be 1,000+ characters long.

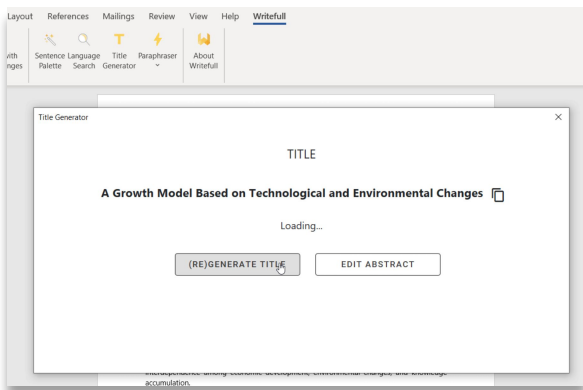

Copy

Click here to copy the abstract and title.

1. Introduction
 Maintenance hemodialysis is a life-saving procedure for end stage renal disease (ESRD) patients. Most of these patients also suffer from comorbidities such as diabetes mellitus and hypertension. Such patients are at higher risk of severe COVID-19 infection [1].

Title Generator

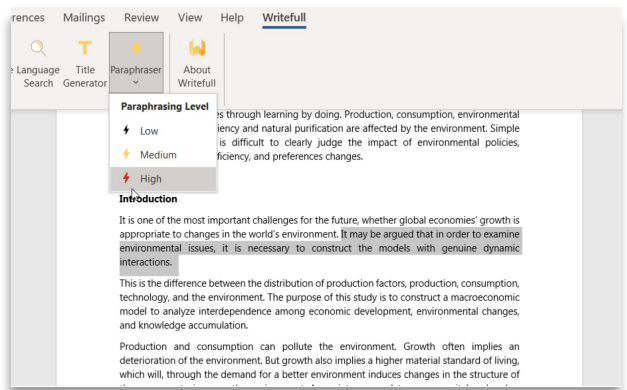

Automatically generates a title based on an abstract or paragraph

The screenshot shows the 'Title Generator' window. At the top, it says 'TITLE'. Below that, a generated title is displayed: 'A Growth Model Based on Technological and Environmental Changes'. There are two buttons at the bottom: '(RE)GENERATE TITLE' and 'EDIT ABSTRACT'. The background shows the Writefull application menu with options like Language, Search, Generator, Paraphraser, and About Writefull.

Paraphraser

Rewrites a sentence or phrase at three levels to add variety to a text

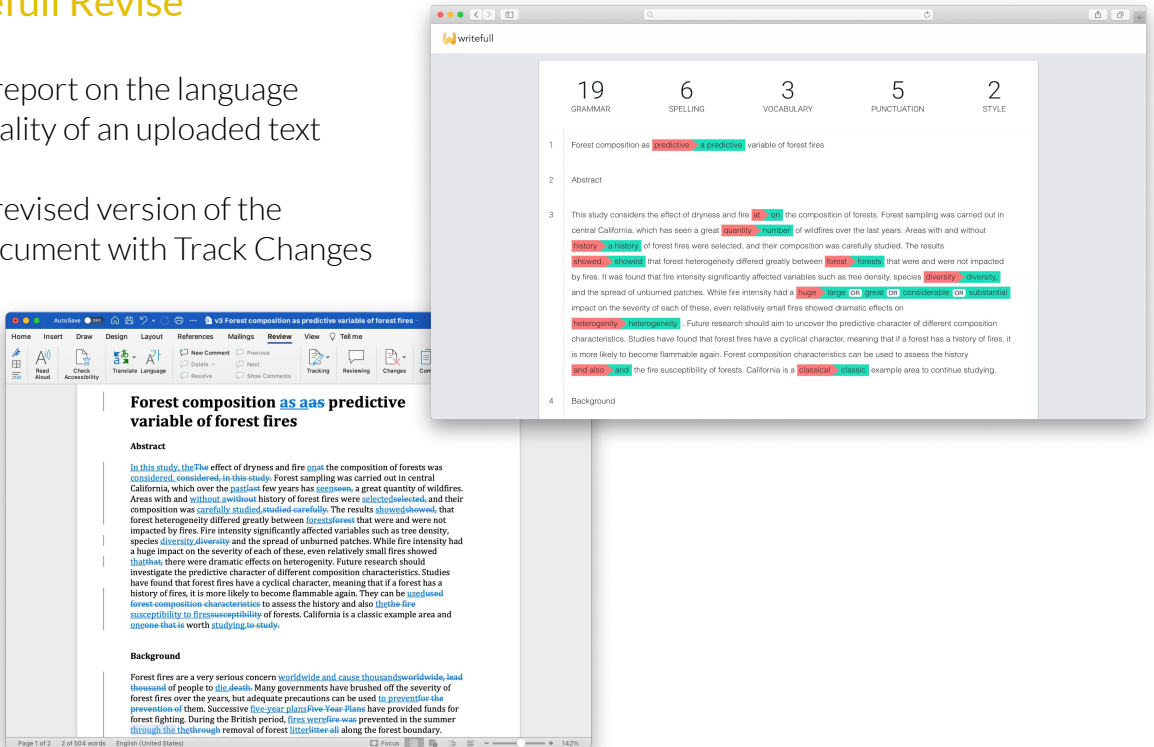

The screenshot shows the 'Paraphraser' dropdown menu. It lists three paraphrasing levels: 'Low', 'Medium', and 'High'. Below the menu, a sample text is shown with some words highlighted in grey, indicating the paraphrasing process. The background shows the Writefull application menu with options like Language, Search, Generator, Paraphraser, and About Writefull.

Writefull Revise and Writefull Cite let your students and researchers revise their texts before they hand them in to a teacher or submit them to a journal.

Writefull Revise

- A report on the language quality of an uploaded text
- A revised version of the document with Track Changes

The screenshot displays the Writefull Revise interface. On the right, a summary report shows the following statistics:

Category	Count
GRAMMAR	19
SPELLING	6
VOCABULARY	3
PUNCTUATION	5
STYLE	2

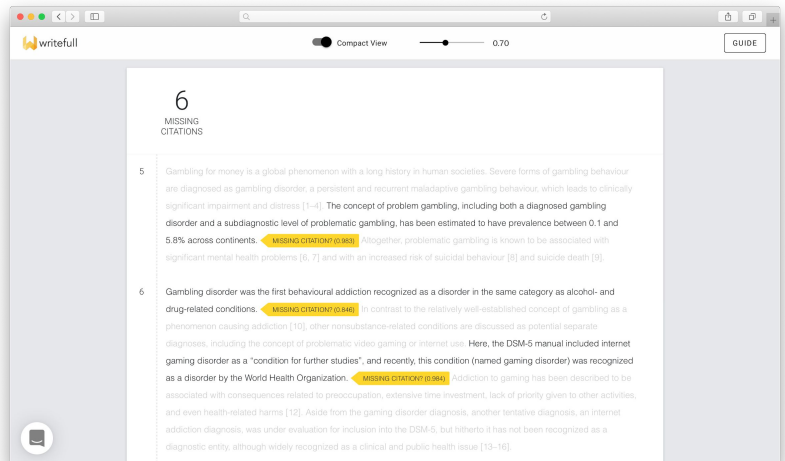

Below the report, a list of detected issues is shown, including:

- Forest composition as **predicted** a **productive** variable of forest fires
- Abstract
- This study considers the effect of dryness and fire **at** the composition of forests. Forest sampling was carried out in central California, which has seen a great **quantity** **number** of wildfires over the last years. Areas with and without **history** **a history** of forest fires were selected, and their composition was carefully studied. The results **showed** **showed** that forest heterogeneity differed greatly between **forest** **woods** that were and were not impacted by fires. It was found that fire intensity significantly affected variables such as tree density, species **diversity** **diversity**, and the spread of unburned patches. While fire intensity had a **huge** **large** **on** **great** **on** **heterogeneity** **on** **substantially** impact on the severity of each of these, even relatively small fires showed dramatic effects on **heterogeneity** **heterogeneity**. Future research should aim to uncover the predictive character of different composition characteristics. Studies have found that forest fires have a cyclical character, meaning that if a forest has a history of fires, it is more likely to become flammable again. Forest composition characteristics can be used to assess the history **and also** **and** the fire susceptibility of forests. California is a **classic** **classic** example area to continue studying.
- Background

On the left, a document editor shows the same text with track changes applied, highlighting the corrections made to the original text.

Writefull Cite

- A report highlighting the sentences that do not have a citation, but need one
- Helps avoid (unwillingly) plagiarizing

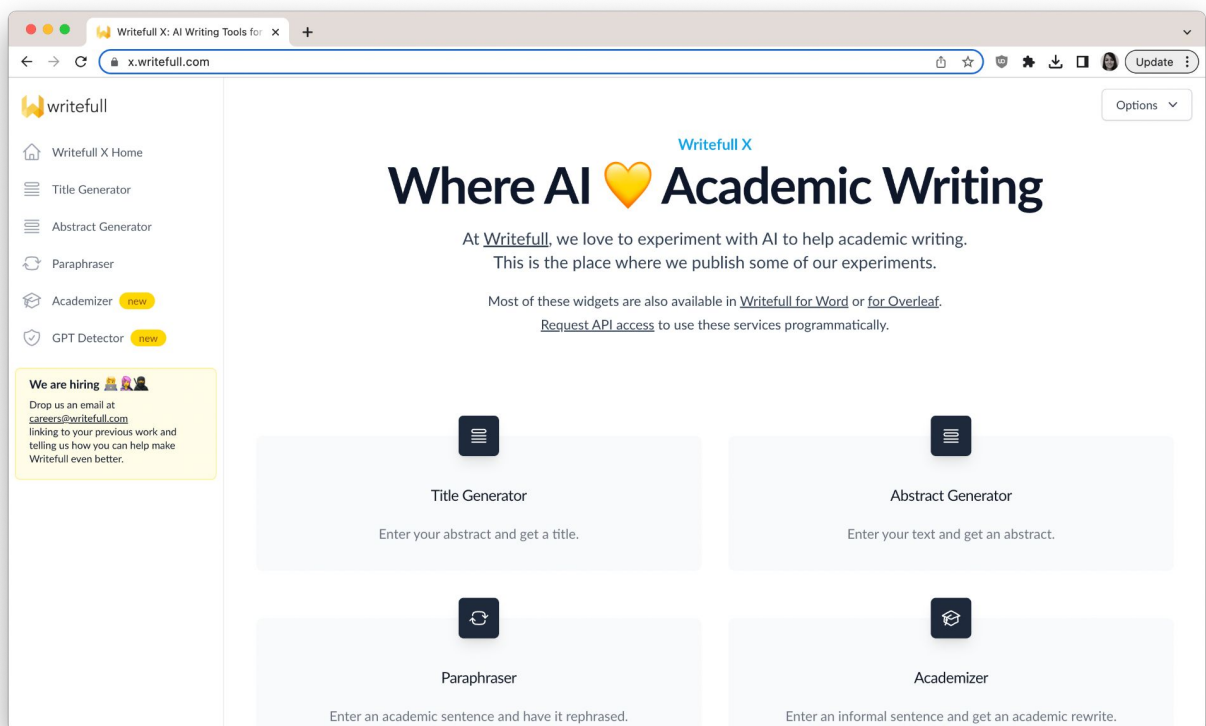

The screenshot displays the Writefull Cite interface. At the top, it shows a 'Compact View' toggle and a progress indicator at 0.70. A 'GUIDE' button is visible in the top right corner.

The main content area shows a list of 'MISSING CITATIONS' with a count of 6. The first two items are:

- Gambling for money is a global phenomenon with a long history in human societies. Severe forms of gambling behaviour are diagnosed as gambling disorder, a persistent and recurrent maladaptive gambling behaviour, which leads to clinically significant impairment and distress [1-4]. The concept of problem gambling, including both a diagnosed gambling disorder and a subdiagnosed level of problematic gambling, has been estimated to have prevalence between 0.1 and 5.8% across continents. **MISSING CITATION (0.94)** Altogether, problematic gambling is known to be associated with significant mental health problems [6, 7] and with an increased risk of suicidal behaviour [8] and suicide death [9].
- Gambling disorder was the first behavioural addiction recognized as a disorder in the same category as alcohol- and drug-related conditions. **MISSING CITATION (0.84)** In contrast to the relatively well-established concept of gambling as a phenomenon causing addiction [10], other nonsubstance-related conditions are discussed as potential separate diagnoses, including the concept of problematic video gaming or internet use. Here, the DSM-5 manual included internet gaming disorder as a 'condition for further studies' and recently, this condition (named gaming disorder) was recognized as a disorder by the World Health Organization. **MISSING CITATION (0.94)** Addiction to gaming has been described to be associated with consequences related to preoccupation, extensive time investment, lack of priority given to other activities, and even health-related harms [12]. Aside from the gaming disorder diagnosis, another tentative diagnosis, an internet addiction diagnosis, was under evaluation for inclusion into the DSM-5, but hitherto it has not been recognized as a diagnostic entity, although widely recognized as a clinical and public health issue [13-16].

Writefull X (available from x.writefull.com)

Writefull X is a website that offers a set of features around academic writing. Some of these are also available in Writefull for Word and for Overleaf, like the Paraphraser and Title Generator. Others are available on Writefull X only, like the **Academizer** (a widget to turn informal sentences into academic ones). A license gives everybody within your institution a high daily quota to use these features.

Academizer

There are lots of ways to do this, but most studies use the egg method.

This is possible using several methods, but the egg method is used in most studies.

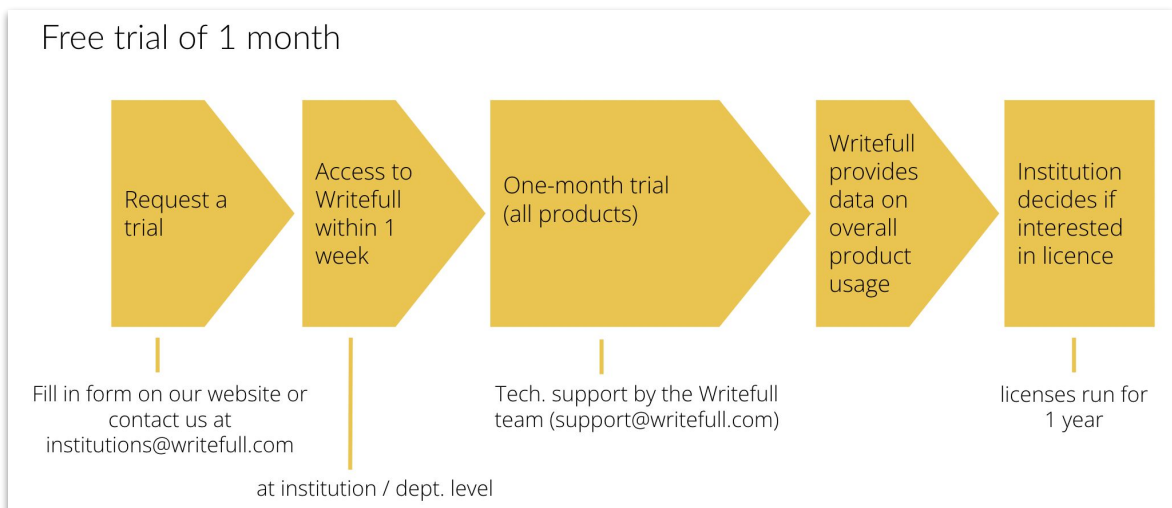

There are many ways to accomplish this, but most studies use the egg method.

There are a variety of methods to achieve this, but in most studies the egg method is used.

Free trial

Writefull offers **free one-month trials**. A trial gives everybody at your institution (or department, faculty, or research group), full access to all five Writefull products. Institutional access is provided on the basis of email domains. You will get access to statistics on product usage to monitor the trial.

If you are interested in a trial, please fill in the trial request form linked to on writefull.com/for-institutions or contact us directly at institutions@writefull.com.

Licenses

Licenses run for one year. Pricing depends on the number of individuals that will be using Writefull. Please contact us for a quote at institutions@writefull.com.

Privacy and security

At Writefull, we take privacy and security very seriously. None of users' texts or searches are stored on our servers or used to improve our language models. All data are encrypted end-to-end, with our SSL certificates being renewed every 90 days. We use the Google Compute infrastructure, which meets the strictest security requirements. Our servers are located in the EU (The Netherlands), following ISO 27001.
